The anatomical « enigma » of ethmoidal DAVFs

Intracranial Dural Arteriovenous Fistulas:
Classification, Imaging Findings, and Treatment
AJNR Am J Neuroradiol 33:1007–13 Jun-Jul 2012

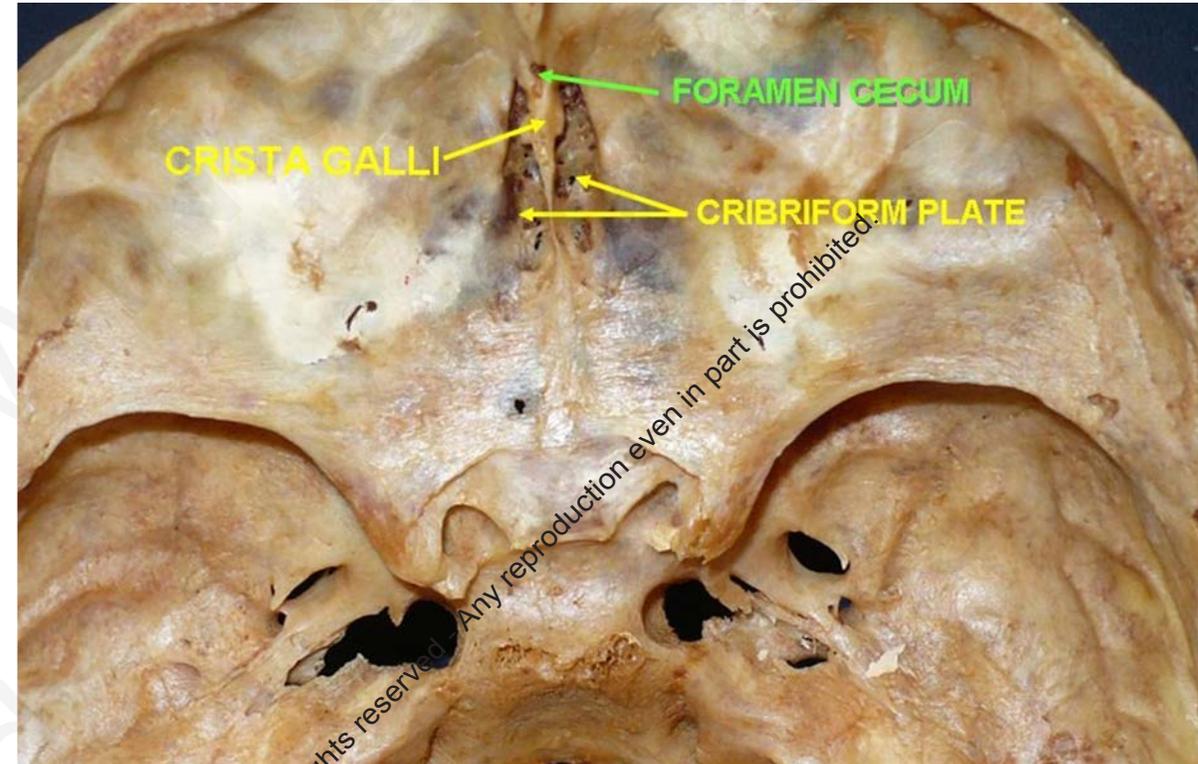

Relation of veins and dura

For ethmoidal DAVFs, there is no nearby collecting sinus

Foramen caecum

- Located anterior to the Crista Galli
- Communication between nasal cavity and anterior fossa
- May be the route of infection spreading
- Controversy among anatomists¹⁻³ on its patency and the existence of true vein bridging from the nasal mucosa to the superior sagittal sinus
- Maybe present in early childhood⁴⁻⁶ with later regression

Anomalous Intracranial Drainage of the Nasal Mucosa: A Vein of the Foramen Caecum?

SUMMARY The existence of the vein of the foramen caecum (VFC) in humans is still controversial. We present 2 patients with intracranial drainage of the nasal mucosa by a frontal cortical vein into a superior sagittal sinus, demonstrated by digital subtraction angiography. In both, the position of the intracranial passage was found to be slightly paramedian. An analogy to the VFC is made.

Management

Principle: venous disconnection

Means:

- Open surgery
 - Orbito-frontal (lateral)
 - Trans frontal sinus
 - Bi-frontal inter-hemispheric
 - Supra-orbital (eyebrow incision)
- Endovascular
 - Trans arterial
 - Trans venous
 - Coils
 - Onyx

Management strategies for anterior cranial fossa (ethmoidal) dural arteriovenous fistulas with an emphasis on endovascular treatment

Clinical article

RONIT AGID, M.D.,¹ KAREL TERBRUGGE, M.D.,¹ GEORGES RODESCH, M.D., PH.D.,²
TOMMY ANDERSSON, M.D., PH.D.,³ AND MICHAEL SÖDERMAN, M.D., PH.D.³

- 24 patients from 3 institutions over 23 years
- Clinical presentation : hemorrhage in 45,8%, fortuitous in 25%
- Treatment:
 - Surgery 15 cases (4 after endovascular attempt)
 - Endovascular : 7 cases (O.A. with glue)
 - Radiosurgery: 2 cases
- All cases cured but 1 had no f-up (radiosurgery)
- No permanent complication

Clinical and Anatomic Insights From a Series of Ethmoidal Dural Arteriovenous Fistulas at Barrow Neurological Institute

Bradley A. Gross, Karam Moon, M. Yashar S. Kalani, Felipe C. Albuquerque, Cameron G. McDougall, Peter Nakaji, Joseph M. Zabramski, Robert F. Spetzler

- 27 patients over 15 years
- Clinical presentation: not mentioned
- Venous drainage: anterior (70%), posterior (30%)
- Treatment:
 - Surgery: 24 (6 after endovascular attempt)
 - Endovascular: 2 (1 trans arterial, 1 trans venous)
 - 1 patient refused surgery after endovascular failure
- 26 cures
- No permanent complication

Journal of Clinical Neuroscience 20 (2013) 287–291

Clinical Study

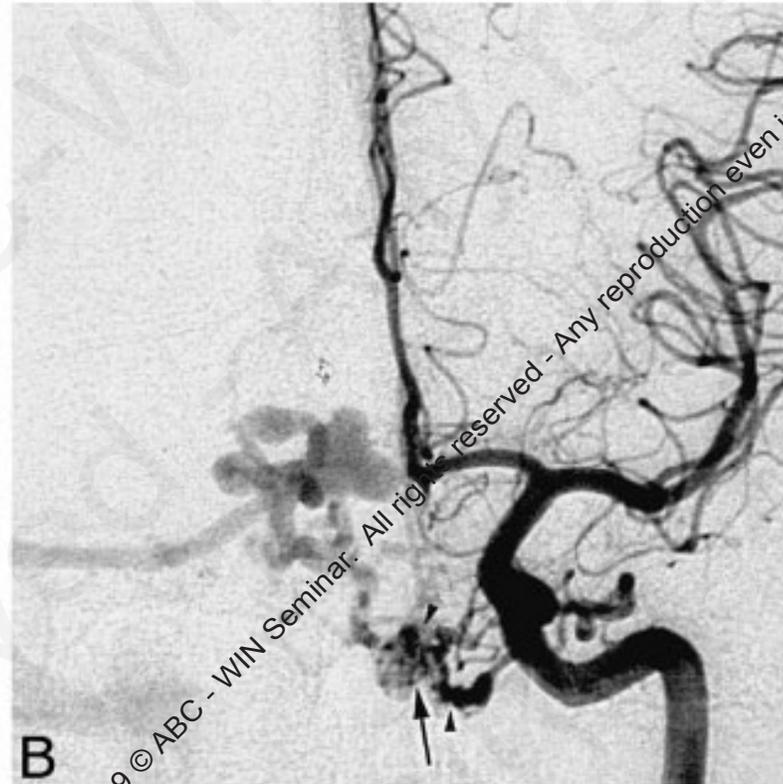

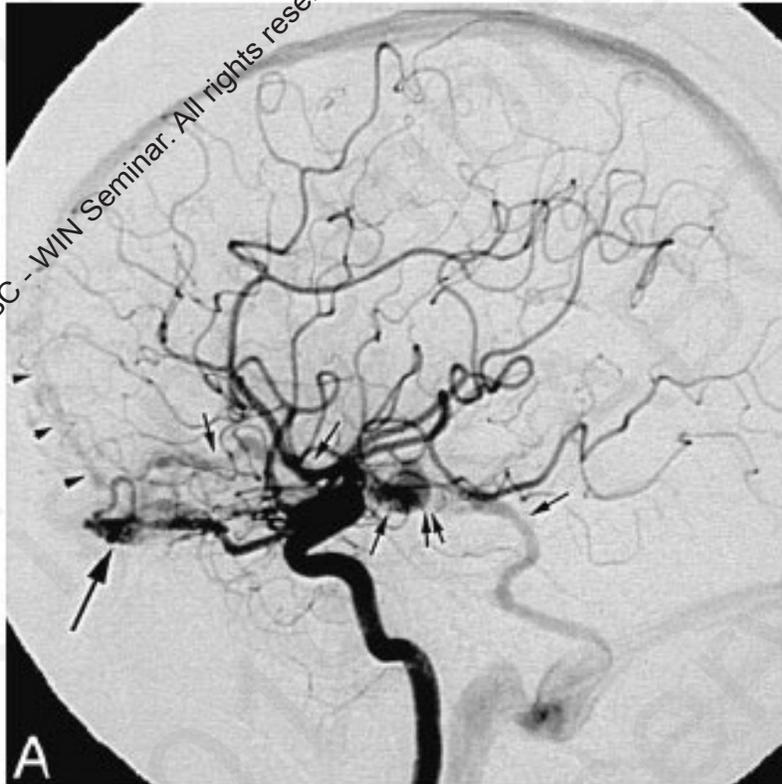

Transarterial embolization of dural arteriovenous fistulas of the anterior cranial fossa with Onyx

Qiang Li[†], Yi-Bin Fang[†], Qing-Hai Huang, Qi Zhang, Bo Hong, Wen-Yuan Zhao, Jian-Min Liu^{*}, Yi Xu

- 11 cases
- All treated via ophthalmic artery
- 10 complete occlusions, 1 failure
- No loss of vision

Transvenous Embolization of a Dural Arteriovenous Fistula of the Anterior Cranial Fossa: Preliminary Results

CHUM series last 15 years

- **13 cases:** 8 men, 5 women, age 41 to 74 mean: 59,9

- **Clinical presentation:**

Fortuitous: 9 (3 aneurysms, 2 other DVF, 1 hypertensive bleed, 1 epistaxis, 1 carotid stenosis, 1 unrelated diplopia)

Hemorrhage: 3

Venous congestion: 1

- **Venous drainage:**

Anterior: 6

Posterior: 4

Both: 3

CHUM series last 15 years

- **Management:**

Surgery: 7 (2 after endovascular attempt)

Endovascular: 3

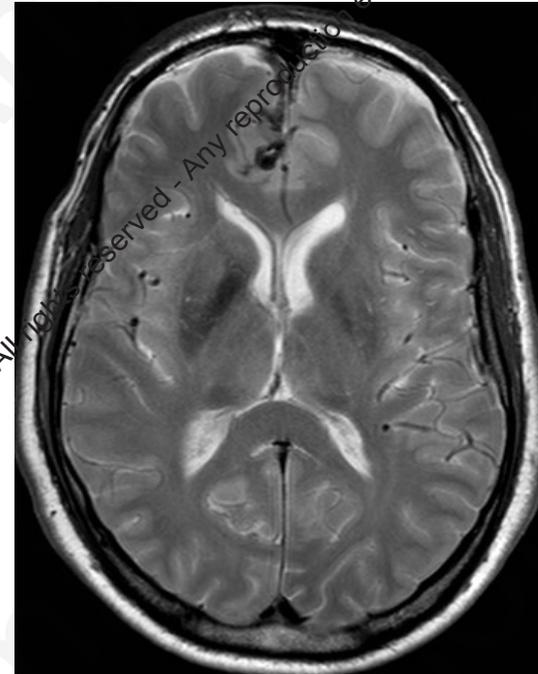

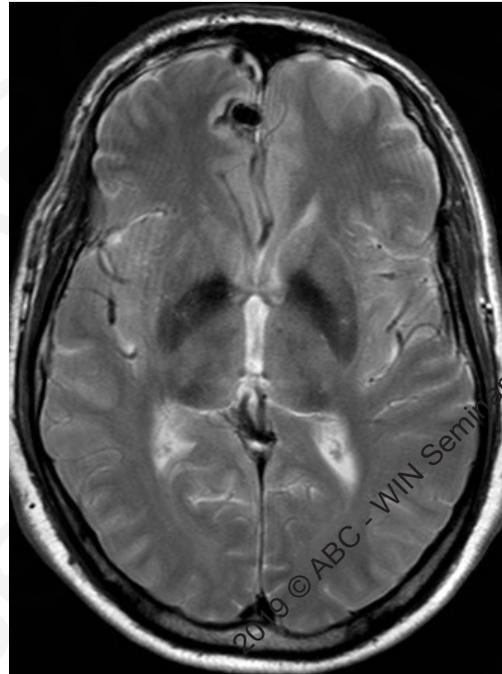

No treatment: 2

Spontaneous thrombosis: 1

- **Outcome:** Good in all patients

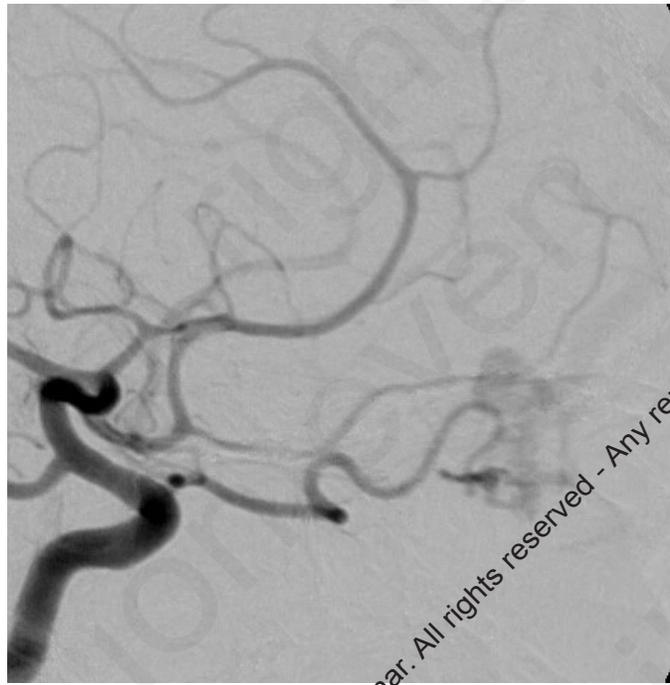

61 year old male
Abrupt headache
No neurological deficit

Spontaneous thrombosis

One week later

Conclusions

- Rare disease
- Anatomically related to a persisting vein of the foramen caecum

Caecal fistula?

Conclusions

- All type III or IV lesions (aggressive lesions)
- We will find more and more fortuitous lesions so that the real natural history is largely unknown
- Lesions that had been considered mostly surgical
- Endovascular treatment, either trans-arterial or trans-venous effective in many situations
